

## The Copy Campaigns Panel

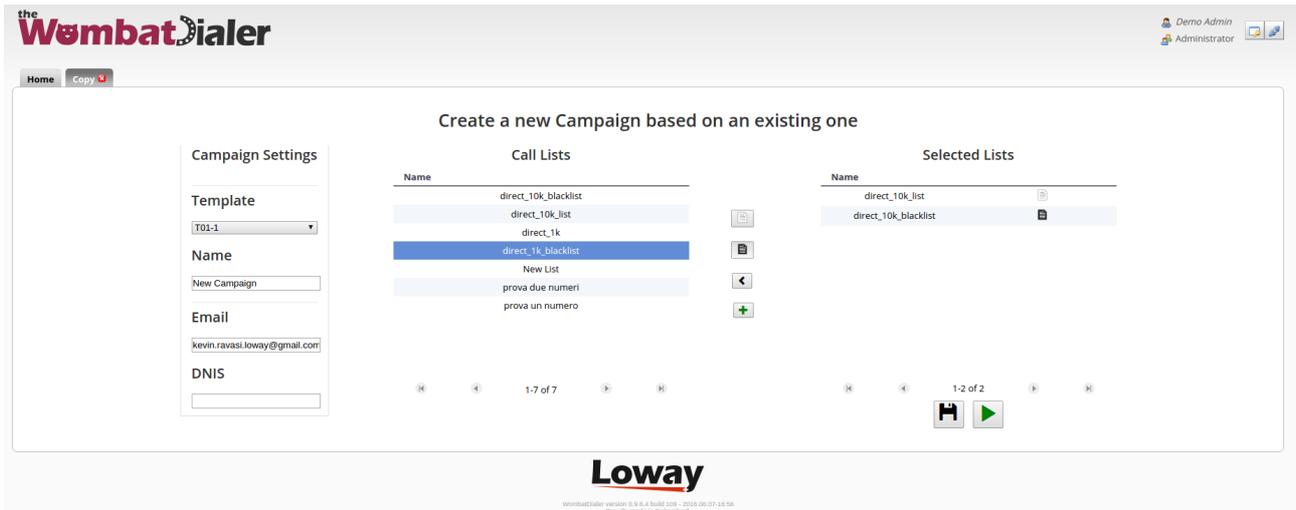

by Kevin Ravasi

The *Copy Campaigns Panel* is one of many new features of WombatDialer 16.06. This new panel allows you to create a new Campaign in just a few seconds, using an existing campaign as a template. This is very useful if your campaigns are very similar and vary slightly from one another, maybe just for the call lists to dial.

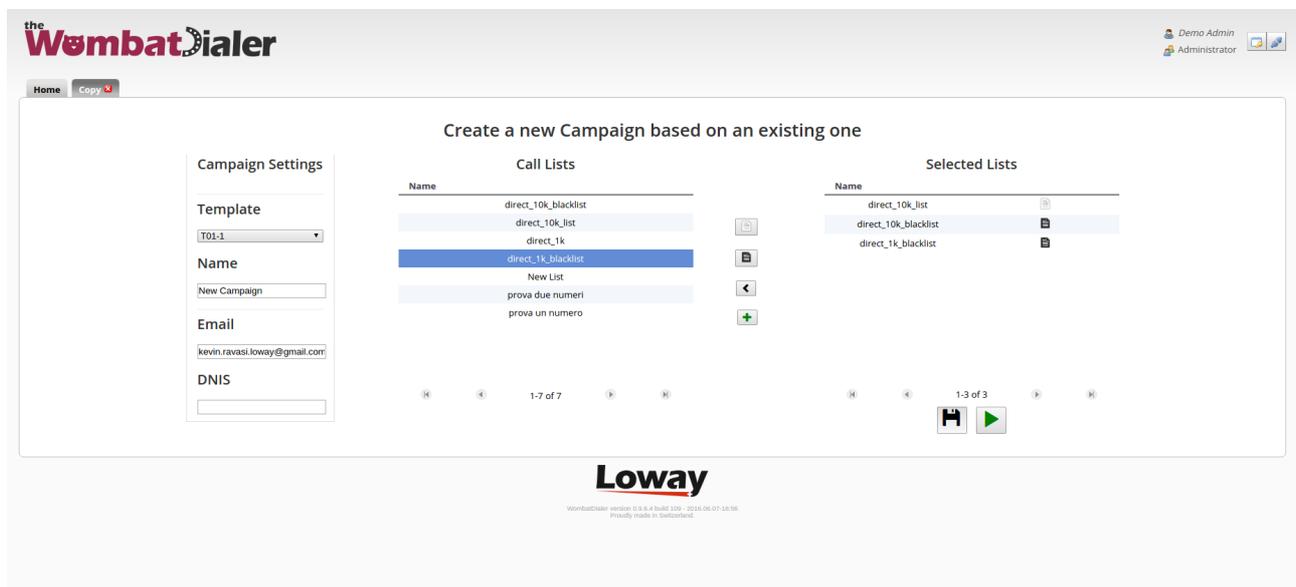

The left part of the screen is where you choose the template for your new campaign. Once you select a template, all the information from that campaign will be loaded. In the example we selected campaign T01-1, so WombatDialer loaded the selected E-mail binded to that campaign and the Call Lists attached to it, displaying them in the Selected Lists table on the right.

Now we need to choose a name for our new campaign, writing it down in the Name Text-Box under the Template menu. We can add or remove Call lists by using the buttons between the Call Lists table, that shows all the available call lists for our new campaign, and the Selected Lists Table.

The first button from the top (the “add as call list” button) adds to the selected lists table a list from the available lists table. To do that just select a list in the table on the left, then press the “add as call list” button. This will bind the selected list to our new campaign.

The second button from the top (the “add as blacklist” button) works exactly like the previous button. The only difference is that the list we choose will be treated as a blacklist and not as a normal call list.

The third button from the top (the “remove list” button) works if the opposite way of the first two buttons. This time we select a list we want to remove from the selected lists table and we press the button, this will remove a previously selected list from our new campaign.

The fourth button from the top (the “new list” button) allows you to create a new Call List from a CSV file.

Once you have set up all the information for your new campaign, you can decide if you just want to save it without running it or if you want to save it and run it directly.

To save your campaign without running it, press the “Save” button (floppy disk), which is the first button of the two buttons at the lower right of the screen.

To save your campaign and run it directly press the “Save and Run” (play button), which is the second button of the two button at the lower right of the screen; this will open the Live Panel automatically.

The screenshot shows the WombatDialer web interface. At the top left is the logo "the WombatDialer". In the top right corner, there is a user profile for "Demo Admin Administrator". Below the navigation bar, there are several dashboard widgets: "Asterisk servers", "Trunks by status", "Trunks by campaign", "Calls per trunk", "End-points", "Est. remaining calls", and "Campaign status". A summary bar shows: "Calls in progress: 49", "Calls placed: 15178", "Completion rate: 84%", "Estimated remaining: 15230", and "Dialer state: Up 6d 05:02:59".

Below the dashboard is a table of campaign runs with the following columns: Campaign, Number, Originate, Connect, Trunk, End point, Retry #, and Agent. The table contains several rows of data for "New Campaign 16.06.15".

On the right side, there is a sidebar with a "Campaigns" section. It lists "Available Campaigns" including Bomba1, Bomba2, Bomba3, Bomba4, and Campagna di Prova. Below that, it shows "Active Runs" (3) and "Recently Closed Runs" (31).

At the bottom of the interface, there is a "Campaign: New Campaign" section with a "Start" button. The footer includes the "Loway" logo and version information: "Wombatdialer version 0.9.6.4 build 109 - 2016.06.07 10:36".

This is all for this tutorial, make sure to check out WombatDialer's new Release!
